Assignment 7 – 75 Points total

1. Create a database documentation script. Include the following (at a minimum)

   - Tablespaces
   - Tablespace free space
   - Datafiles
   - Redo logs
   - Database objects
   - Segments
   - Process information
   - Session information
   - Extents used by tables/indexes
   - Free space in tablespace
   - Other areas of interest

This script should be written so that it can be run against any oracle database and give an output that informs you of the layout and configuration of the database. Think of it as if were given 20 databases to manages that you have never seen before. What information would you like to know about each of them so that you understand what you are taking over? Be creative and use your imagination.

Points 50

2. What would your Maintenance Framework look like? What type of items would you have in it?

   This should be about a 500 (approx.) word narrative. Use graphics if it helps with the explanation

Note: Submit your assignment in a word document (font style: Times New Roman; font size: 12) and script should be in a text file (.sql extension). Please include a sample script output/screenshots in the word document.
